ABSTRACT

Notifice is an android app planned with the purpose of easing the flow of communication within the department. This will provide us a standard platform for all the information flowing among the students and faculties. The introduction of a standard application for such purpose intended especially for our college, does eliminate being dependent on other third-party applications.

The way Notifice will work is that, it will first require the user to login with their unique ID (USN or faculty ID) and password. This helps control any kind of security disorder. Once the login is successful, they will be directed to the next screen where they can see different sections that include "Notice Board "and their respective "Class group". The "Notice Board "section will include soft-copy of the items that are updated on our department Notice Board. This may even include the results and other information about different events. The "Class Group "section is for the faculties to contact the students and inform them on any matters of the subject or anything related. This way all the students are in contact with all the students and the students won't have to go through the trouble of creating class groups in other third-party applications.
